

# TheCloud Hosted Desktop: the ultimate in application delivery

TheCloud Hosted Desktop is the ultimate vehicle to deliver published business applications from our central core to any device. Our secure platform delivers always-on applications and provides users with the flexibility to work where, when and how they want via our MPLS core or the public internet.

## Software and applications

TheCloud Hosted Desktop allows us to publish the latest software and applications directly to your customers' Desktop removing the headaches of software management, major purchases, and need for specialised hardware and support. Whether it is a standard Microsoft® suit or a bespoke application that customers require, each Desktop is tailored to the individual user via an on-demand (pay as you go) licensing model where applicable.

## Infrastructure and maintenance

Our extensive infrastructure using the latest technology allows our system to be updated and expanded without any downtime or loss in performance. With pro-active capacity management being the key, we remove the burden and cost from you and your customers.

## Business continuity and mobility

Using a Hosted Desktop also allows your customers' businesses to insure against local disasters, such as office fires, transport strikes or severe weather conditions that would prevent staff working from the office. Because users can access their Hosted Desktop

from anywhere, working from home or from a temporary location in times of disaster guarantees business continuity.

## Hosted backup and recovery

At TheCloud we provide a highly secure and automated method of safeguarding business data by storing and archiving as required. This not only allows your customers to meet any legal requirements but provides them the peace of mind that their data is safe, secure and protected. Data is securely backed up and can be replicated to multiple devices and locations to ensure additional security and availability if required.

## More than just an IT provider

Here at TheCloud we don't just help you supply IT services. Together with our voice, connectivity and networking options, we help you provide unified communications creating partnerships with you and your business customers.

We empower you to become a highly agile machine by accessing the latest technology without the burden of infrastructure and software costs.

Call us today to start your journey as a Reseller.
