

TheCloud MPLS and VPLS: advanced wide area networking

Networking and connectivity is just as important as hosting. Without the right networking solution, business communications cannot function optimally. At TheCloud we pride ourselves on our ability to enable you to offer customers a complete end-to-end solution.

MPLS

TheCloud MPLS network (Multi Protocol Label Switching) is a managed wide area networking solution for multi-site businesses. It provides your customers with secure, private networking on a resilient core network, which enables simplification of network architecture combined with improved business processes and efficiencies.

A range of MPLS customer access options enable a design that is unique to the end user requirements on a per site basis. Centralised applications are an option for additional process improvements, when combined with our co-location and cloud based services. Where internet access is provided from TheCloud MPLS platform, access is provided by managed core firewalls, centralising internet access and simplifying Internet policy management. Managed routers provide an opportunity to review operating models, allowing IT teams to focus on internal projects.

VPLS

VPLS (Virtual Private LAN Service) is one of the services offered over our managed MPLS network.

VPLS is an Ethernet based point-to-multipoint layer 2 VPN service that allows businesses to connect multiple Ethernet LANs into a single network.

The benefits

The benefits to your customers of utilising our MPLS network include better performance, lower total cost of ownership, greater flexibility to accommodate new technologies, better security and survivability.

- Better performance through quality of service (QoS) and priority queuing so the network knows which traffic is most important and ensures that it takes priority
- Reduction in on-going WAN operating costs by up to 50%, while maintaining a high level of reliability and service

- “Future-proof” the network architecture so it can respond rapidly to changing business needs, including new services, latency sensitive traffic, bandwidth intensive traffic, VoIP and video
- Lower packet loss means faster response for many applications
- Network survivability from a fully meshed nature
- Delivery of firewalled internet access from TheCloud to specified facilities to eliminate internet local loop costs

More than just an IT provider

Here at TheCloud we don't just help you supply IT services. Together with our voice, connectivity and networking options, we help you provide unified communications creating partnerships with you and your business customers.

We empower you to become a highly agile machine, accessing the latest technology without the burden of infrastructure and software costs.

Call us today to start your journey as a Reseller.

Enhance performance and
decrease costs with
TheCloud MPLS network

Ideal solution for single seat
to multisite organisations
